Group

## DUAL2 BATTERY PACK

for SE400AT-2

### HOW IT WORKS:

Two standard SE400 batteries are attached to special contact plates mounted on the shoulder straps of your back pack.

This means perfect balance, and no added weight to the fan unit at the back.

Freedom of arm movement is not affected.

The two batteries are connected to an attachment that fits on the SE400AT-2 just like a standard battery.

No modification needs to be done to the fan unit.

## Extend your work time without changing batteries26

- Ideal for all extended work routines where battery change is impractical or difficult
- Perfect for users of SE400AT-2 together with SE-SHIELD protective suits
- Ni-Mh batteries
- No memory effect
- 2-hour recharge time approx.
- Single battery typically lasts 4h at medium work
- Microprocessor-controlled re-charger
