THE NEW
SR900 SYSTEM

SR 900 SYSTEM

SR 900 is a completely new system where the user can easily customise the product based on site requirement and needs.

EXCEPTIONAL
FIT WITH TOP
PERFORMANCE
AND COMFORT

Soft/durable TPE with wide face seal surfaces provides a high level of protection

Low weight.

Three sizes available to ensure the best possible fit for most face shapes.

Elasticated, easily adjustable head harness with large crown plate for a comfortable secure fit.

Range of accessories and service kits available.

Double moulded TPE/PP mask with a detachable filter holder allows you to expand your own system.

SR 951 & SR 952 HOSE

Basic hose SR 951 and double hose SR 952 are very flexible and offer top durability.

- Hose selection based on site conditions.
- Can be used with a hose protector when welding and grinding.

SR 951

SR 952

SR 900 HALF MASK

Half mask with excellent fit, top protection and excellent breathing comfort.

- Extremely low inhalation and exhalation resistance reduces wearer fatigue.
- Can be used with filters from the Sundström Safety filter range for negative pressure masks.
- Suitable for use with lighter workloads and lower exposure levels.

SR 700 BATTERY-OPERATED PARTICLE FILTER FAN

Battery-operated particle filter fan for connection to SR 900 using basic hose SR 951 or double hose SR 952.

- Hose selection based on site conditions.
- Can be used with filters from the Sundström Safety filter range.
- The fast airflow improves the user's work conditions when carrying out heavy, hot and long-term work.
- Suitable for use with heavier workloads and greater exposure levels of particles.

SR 507 COMPRESSED AIR FED

Compressed air device SR 507 for connection to SR 900 using basic hose SR 951.

- Respiratory device with continuous flow where the air from a compressor is purified using a compressed air filter.
- Suitable for use with heavier workloads and working with contaminants with poor warning properties or where filter protection does not work.

SR 905 WAIST-WORN FILTER

Waist-worn filter for connection to SR 900 using basic hose SR 951 or double hose SR 952.

- Hose selection based on site conditions.
- Extremely low inhalation and exhalation resistance reduces wearer fatigue.
- Can be used with filters from the Sundström Safety filter range for negative pressure masks.
- Suitable for use with e.g. welders or grinders.

SR 500 BATTERY-OPERATED FILTER FAN

Battery-operated filter fan for connection to SR 900 using basic hose SR 951 or double hose SR 952.

- Hose selection based on site conditions.
- Can be used with filters from the Sundström Safety filter range.
- The fast airflow improves the user's work conditions when carrying out heavy, hot and long-term work.
- Suitable for use with heavier workloads and greater exposure levels of particles or gases and fumes.

SR 307 COMPRESSED AIR ATTACHMENT

Compressed air attachment SR 307 for easy mounting to Half mask SR 900.

- Respiratory device with continuous flow where the air from a compressor is purified using a compressed air filter.
- Suitable for use with heavier workloads and working with contaminants with poor warning properties or where filter protection does not work.
